

## Solution 2 (Integrated Crane Weigh solution in shipping Process...)

Weighing solution integrated with Crane weigher promoting accuracy of incoming Raw materials , simultaneously logging and communicating with the Customers application software !

### Situation as it was!

Ensuring correct qty of metal sheets received code wise from Vendors and material movement to stores was tedious , involving to many people, saving productive time was a challenge, more so when the production volumes were extremely high,.

### Situation as it is now!

Essae's "Wireless communication " solution answered the need of the customer, employing Crane weigh plus SI 810.

Heavy Metal sheets are weighed at Material Gate and details are transmitted to SI 810 through wireless and further to Data Server through GPS/ GPRS. Yet eliminated too many hands at various stages from Gate to Stores. weighing, counting, Material handling , all at one go, saves time and money and with least effort. Elimination of Errors in MIS. with Ensuring correct qty of materials received at inward gate and communicating to the server with MIS report, communicating with the PC application software

**Application :**  
Large Volume manufacture & shipping of mobile devices, electronic gadgets, with Bar Coded , unique ID & Shipping details
